

METAMORPHOSIS

Metamorphosis generates transformative change in shape, nature, or structure. Animals physically develop and change from birth to maturity. Concepts and ideas morph and change over time. Even the earth's landscape progresses through many geological and ecological stages.

Change may be positive, negative, frightening or enlightening. The pieces in this exhibition demonstrate the inevitability of change—physical, philosophical or personal—and the results of such transformations, no matter how subtle.

JUROR: David Hornung

VENUES:

Quilt Festival Houston
Houston, Texas
NOVEMBER 8–11, 2018
